

## Reading a Term in polynomial Using Structure

```
#include <stdio.h>

struct term
{
    int coef;
    int exp;
};

int main()
{
    struct term p;
    printf("Enter a coefficient and exponent");
    scanf("%d%d",&p.coef,&p.exp);
    printf("%d x ^%d",p.coef,p.exp);
    return 0;
}
```
