

# Prefix, Postfix, Infix Notation

# Infix Notation

 To add  $A, B$ , we write  
 $A+B$

 To multiply  $A, B$ , we write  
 $A*B$

 The operators ('+' and '\*') go in  
between the operands ('A' and 'B')

 This is "Infix" notation.

# Prefix Notation

 Instead of saying "A plus B", we could say "add A,B " and write  
 $+ A B$

 "Multiply A,B" would be written  
 $* A B$

 This is *Prefix* notation.

# Postfix Notation

 Another alternative is to put the operators after the operands as in

$A B +$

 and

$A B *$

 This is *Postfix* notation.

# Pre A In B Post

 The terms infix, prefix, and postfix tell us whether the operators go between, before, or after the operands.

# Parentheses

 Evaluate  $2+3*5$ .

 + First:

$$(2+3)*5 = 5*5 = 25$$

 \* First:

$$2+(3*5) = 2+15 = 17$$

 Infix notation requires Parentheses.

# What about Prefix Notation?

$$+ 2 * 3 5 =$$

$$= + 2 \underline{* 3 5}$$

$$= \underline{+ 2 15} = 17$$

$$* + 2 3 5 =$$

$$= * \underline{+ 2 3 5}$$

$$= \underline{* 5 5} = 25$$

No parentheses needed!

# Postfix Notation

$$2\ 3\ 5\ *\ +\ =$$

$$= 2\ \underline{3\ 5\ *}\ +$$

$$= \underline{2\ 15}\ +\ = 17$$

$$2\ 3\ +\ 5\ *\ =$$

$$= \underline{2\ 3\ +}\ 5\ *$$

$$= \underline{5\ 5\ *} = 25$$

No parentheses needed here either!

## Conclusion:

 Infix is the only notation that requires parentheses in order to change the order in which the operations are done.

# Fully Parenthesized Expression

 A FPE has exactly one set of Parentheses enclosing each operator and its operands.

 Which is fully parenthesized?

$$(A + B) * C$$

★  $((A + B) * C)$

$$((A + B) * (C))$$

# Infix to Prefix Conversion

Move each operator to the left of its operands & remove the parentheses:

$$((A + B) * (C + D))$$

# Infix to Prefix Conversion

Move each operator to the left of its operands & remove the parentheses:

$$(+ A B * (C + D))$$

# Infix to Prefix Conversion

Move each operator to the left of its  
operands & remove the parentheses:

$$* + A B (C + D)$$

# Infix to Prefix Conversion

Move each operator to the left of its  
operands & remove the parentheses:

$* + A B + C D$

Order of operands does not change!

## Infix to Postfix

$$(((A + B) * C) - ((D + E) / F))$$

A B + C \* D E + F / -

- 📦 Operand order does not change!
- 📦 Operators are in order of evaluation!

# Computer Algorithm

## FPE Infix To Postfix

Assumptions:

1. Space delimited list of tokens represents a FPE infix expression
  2. Operands are single characters.
  3. Operators  $+$ ,  $-$ ,  $*$ ,  $/$
- 

# FPE Infix To Postfix

-  Initialize a Stack for operators, output list
  -  Split the input into a list of tokens.
  -  for each token (left to right):
    - if it is operand: append to output
    - if it is '(': push onto Stack
    - if it is ')': pop & append till '('
- 

# FPE Infix to Postfix
